

Portfolio Build — Live Review

FlyRank AI Internship

Student	Sajal Dildar
Portfolio	sajal-portfolio.framer.website
Status	Live public portfolio

1. Portfolio Status

The portfolio is live and publicly accessible. It presents my work, projects, skills, and background as a BSIT student interested in backend development and AI engineering. The purpose of this build was to move the portfolio from a work-in-progress into a real public site that another person could evaluate.

2. Real-Person Feedback

I shared the live portfolio with a real reviewer and asked them to assess what they understood, what was confusing, and what could be improved.

“The portfolio looks clean, modern, personal, and more polished than a typical student assignment.”

The reviewer understood that I am a BSIT student working toward backend development and AI engineering, with experience in Python, APIs, databases, and software development.

The main confusion was my exact career direction because the portfolio presents me as a Software Engineer, aspiring Backend Developer, and AI Engineer. The reviewer suggested making my intended professional direction more focused.

They also noted that the portfolio currently communicates what I can do more strongly than it proves it. My projects would benefit from stronger case studies explaining what I built, the technologies used, my role, and what I learned or achieved.

Some wording also feels generic or template-like. Making the copy more personal would help the portfolio represent me more clearly. The reviewer also noted that the portfolio is slightly behind my current experience because I am now doing an AI internship.

Area	Reviewer assessment
Visual / design quality	8/10 — clean, modern and personal
Professional impact	6–7/10 — stronger proof and positioning needed

3. Still Ugly List

- My exact career direction needs to be clearer.
- Project sections need stronger case studies instead of mainly describing capabilities.
- Projects should explain my role, technologies, implementation, and results more clearly.
- Some portfolio wording needs to sound more personal and less generic.
- My current AI internship experience needs to be reflected in the portfolio.
- The portfolio should communicate evidence of my skills more strongly instead of relying mainly on skill descriptions.

- The site can be improved further, but the goal of this build was to make the work live and understandable rather than wait for perfect polish.

4. What I Learned

Getting the portfolio live changed the project from something I was still designing into something another person could actually evaluate. The external feedback showed that visual design is not enough by itself; the portfolio also needs clear positioning and strong evidence of what I can build.

My next improvements will focus on making my professional direction clearer, strengthening the project case studies, and updating the portfolio with my current internship experience.
